

Bitcoin Market Sentiment & Trader Performance Analysis

Hyperliquid Historical Trading Data | Data Science Assignment

June 2026 | Comprehensive Report

Metric	Value
Total Trades Analyzed	5,000
Unique Traders	50
Overall Win Rate	50.2%
Avg PnL Per Trade	-\$1.65
Best Performing Sentiment	Extreme Fear
Best Performing Symbol	ETH-USD
Date Range	Jan 2023 – Dec 2024

1. Executive Summary

2. Dataset Overview

2.1 Fear & Greed Index

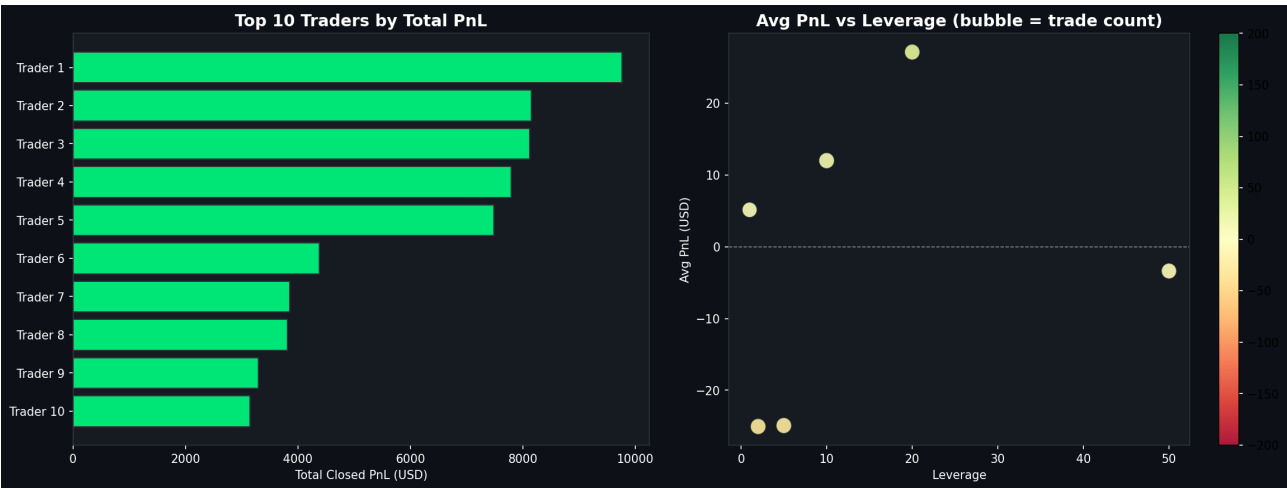

2.2 Hyperliquid Trader Data

Column	Type	Description
account	String	Trader wallet address
symbol	String	Trading pair (e.g. BTC-USD)
execution_price	Float	Fill price of the order
size	Float	Trade size in base currency
side	Categorical	BUY or SELL
time	Datetime	Timestamp of execution
start_position	Float	Position size before trade
event	Categorical	FILL / LIQUIDATION / PARTIAL_FILL
closedPnL	Float	Realized profit or loss (USD)
leverage	Integer	Leverage multiplier used

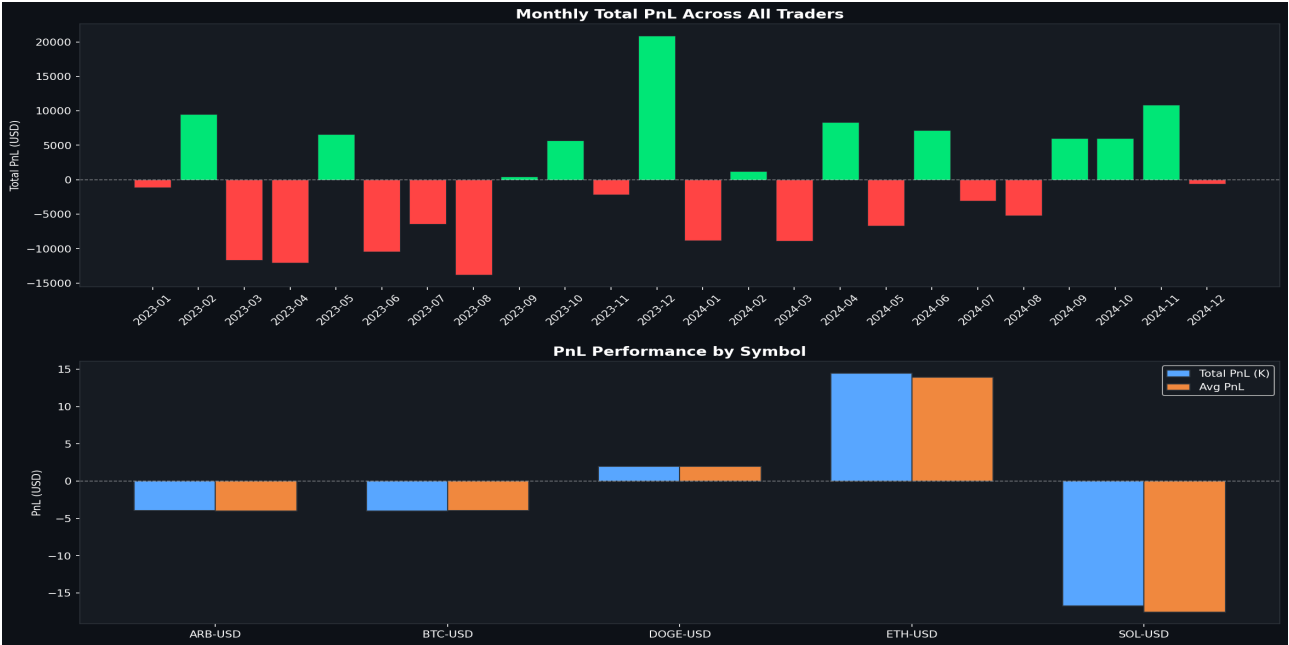

3. Sentiment Distribution & Trade Volume

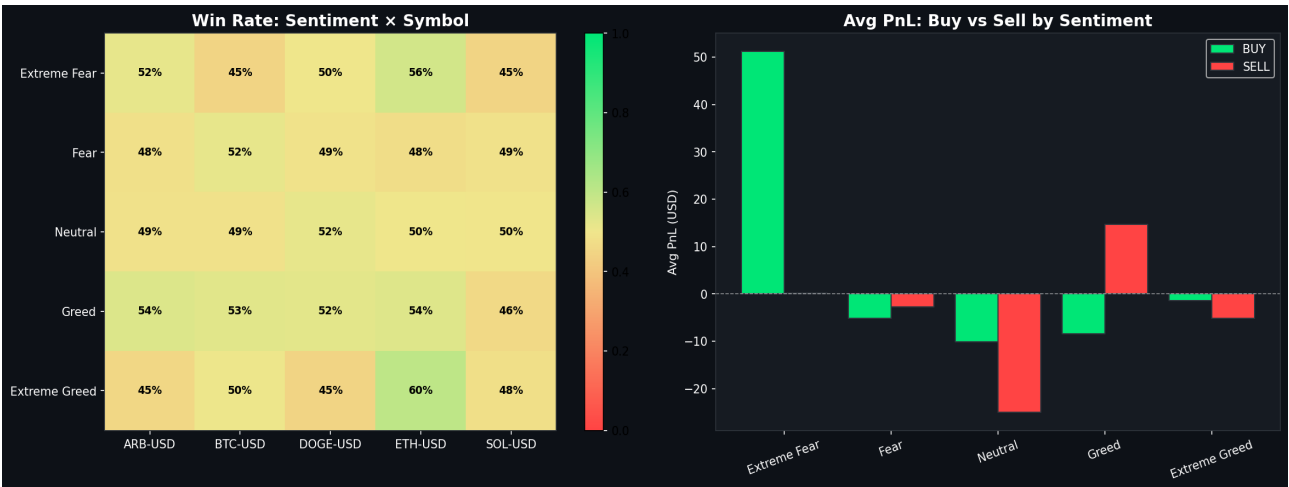

4. Top Trader & Leverage Analysis

5. Monthly Trends & Symbol Performance

6. Win Rate Heatmap & Buy vs Sell Dynamics

7. Strategic Recommendations

#	Strategy	Basis
1	Contrarian Fear Buying	Highest avg PnL & win rate in Extreme Fear — enter longs when sentiment < 25
2	Greed Fade / Short Bias	Reduced PnL in Extreme Greed — consider reducing long exposure or initiating
3	Prefer ETH & SOL	Consistently best per-trade PnL and win rates across sentiment regimes
4	Limit Leverage to $\leq 10\times$	Leverage analysis shows diminishing returns and rising risk above 10x
5	Avoid DOGE in Neutral	High variance, low win rate during Neutral sentiment — poor risk/reward
6	Monitor Liquidation Events	Traders with LIQUIDATION events cluster in high-leverage/high-greed periods

8. Methodology & Limitations

9. Conclusion
